NEW AQUACEL® EXTRA
Hydrofiber® dressing with strengthening fibre

STRENGTH • ABSORBENCY • CONFIDENCE

More to love about AQUACEL® dressings
Clinicians face many wound management challenges every day

- **Retaining and controlling exudate levels** to prevent maceration
- **Removing harmful bacteria and enzymes** from the wound to reduce delayed healing
- **Minimising patient pain and discomfort** during dressing changes or when dressing is in situ
- **Containing costs** while providing effective care

**Hydrofiber® Technology, found in the AQUACEL® family of dressings, is uniquely designed to:**

- **Lock in** wound exudate and bacteria and reduce lateral spread of fluid
  - Helps protect periwound skin from maceration
  - May help minimise cross-infection and risk of wound infection during removal

- **Micro-contour** to the wound bed
  - Minimises “dead space” where bacteria can grow
  - Maintains an optimal moisture balance in the wound bed

- **Respond** to wound fluid levels by forming a cohesive gel
  - Unique gelling action protects tender wound tissue and minimises pain associated with dressing changes

**AQUACEL® dressing** is supported by a 15-year clinical heritage that demonstrates efficacy

- 17 randomised controlled trials
- 50+ review papers as well as scientific studies
- Demonstrated evidence of progressing wounds toward healing
- Shown to be a cost-reducing adjunct to a protocol of care
