Experience the difference

As users transition from your care back to their everyday lives, we want them to feel ready, empowered and as independent as possible. GentleCath™ Pro Closed-System Intermittent catheters will be with them on their journey through life, helping them to re-establish their confidence and continue to achieve their goals.

Making a difference for over 40 years

An experienced leader in continence care, ConvaTec has made it a priority to listen to the needs of users and the insights of caregivers. This is embodied in the products we design and the services we offer. The GentleCath™ Pro Closed-System is designed for user safety and success.

GentleCath™ Pro Closed-System

Minimize the risk of infection with no-touch catheterization^{1,2}

- GentleCath™ Pro Closed-System catheters include a collection bag, which allows the user to catheterize without touching the catheter, while providing the convenience to use the catheter where and when you need it.
- The GentleCath™ Introducer Tip is designed to be inserted into the urethra and allow the catheter to pass through, helping it to avoid coming into contact with bacteria that may build up at the entrance to the urethra.
- This no-touch catheterization is designed to help minimize the risk of infection.^{1,2}

GentleCath™
that's a relief

How to use the GentleCath™ Pro Closed-System:

STEP 1: Wash your hands with soap and water and wash the entrance to the urethra with an antiseptic swabstick, towelette or soap and water.

Open the peel pack and take out the GentleCath™ Pro catheter. Remove the plastic cap from the silicone "introducer tip". A slight twisting motion makes this easier.

STEP 2: While holding the introducer guide in one hand, feed the pre-lubricated catheter forward, until the tip is about to come out of the flexible introducer tip. This helps give the introducer sufficient firmness to enter the urethral opening. Be careful not to push the catheter completely out of this tip.

STEP 3: You can add additional lubricant to the loaded tip by swabbing gel from inside the plastic cap.

STEP 4: Insert the soft silicone tip into the urethral opening, then begin to advance the catheter into the urethra 1 to 2 inches at a time. Continue until the catheter has entered the bladder and urine begins to flow.

STEP 5: To make sure the bladder is emptied completely, remove the catheter with the bag attached and stop if more urine starts to flow.

STEP 6: Once the catheter is removed, grasp the bag at the corner where it says "TEAR HERE TO EMPTY" and tear the bag gently down towards the middle of the bag. This will allow you to dispose of the contents without any mess.

Then discard the catheter and wash your hands.

Medicare: At-a-Glance*

Per the Medicare guidelines on Intermittent Urinary Catheterization, any patient who utilizes intermittent catheters can receive one sterile urological catheter and one packet of lubricant for each catheterization.

- Physician prescriptions should reflect the actual number of times a patient catheterizes per day
- Medicare will cover one catheter per cathing episode up to a maximum of 200 intermittent catheters per month

| Kit Versions: | French Size | Quantity Per Unit | Order Code |
